**What's a Healthy Weight?**

Good health is about more than just your weight. It depends on many things, including your family's medical history, your genes, whether you smoke, the type of food you eat and how active you are. A combination of factors determines our weight, and that's why it's difficult to set an exact ideal weight that applies to everyone. It's important to make an objective assessment of your size. Looking at yourself in the mirror isn't a good way to assess whether you're a healthy weight.

39. According to the article, which of the following will influence your weight?  
 (A) your parents' health (B) the quality of your DNA (C) your diet (D) all of the above
40. What is the article trying to suggest?  
 (A) We need to lose weight. (B) We need to look at ourselves in the mirror to watch our weight.  
 (C) Weight is only one factor of keeping good health. (D) It is hard to assess our weight objectively.
